Pearson Edexcel Level 3 GCE	Centre Number	Candidate Number
Mathemat Advanced Subsidiar Paper 2: Statistics a	ry	
Wednesday 23 May 2018 – Time: 1 hour 15 minutes	Morning	Paper Reference 8MAO/02

Candidates may use any calculator allowed by the regulations of the Joint Council for Qualifications. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- There are **two** sections in this question paper. Answer **all** the questions in Section A and **all** the questions in Section B.
- Answer the questions in the spaces provided
 there may be more space than you need.
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- Answers should be given to three significant figures unless otherwise stated.

Information

- A booklet 'Mathematical Formulae and Statistical Tables' is provided.
- There are 9 questions in this question paper. The total mark for this paper is 60.
- The marks for each question are shown in brackets
 use this as a guide as to how much time to spend on each question.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

SECTION B: MECHANICS

Unless otherwise indicated, wherever a numerical value of g is required, take $g = 9.8 \,\mathrm{m\,s^{-2}}$ and give your answer to either 2 significant figures or 3 significant figures.

Answer ALL questions. Write your answers in the spaces provided.

6.	A man throws a tennis	ball into	the air so	that, at the	instant w	hen the	ball	leaves l	his l	nand,
	the ball is 2 m above th	ne ground	l and is mo	ving vertic	ally upwa	ards with	h spe	eed 9 m	s^{-1}	

The motion of the ball is modelled as that of a particle moving freely under gravity and the acceleration due to gravity is modelled as being of constant magnitude $10 \,\mathrm{m \, s^{-2}}$

The ball hits the ground *T* seconds after leaving the man's hand.

Using the model, find the value of <i>T</i> .	(4)

Question 6 continued
(Total for Question 6 is 4 marks)

7.	A train travels along a straight horizontal track between two stations, A and B.	
	In a model of the motion, the train starts from rest at A and moves with constant acceleration $0.3 \mathrm{m \ s^{-2}}$ for $80 \mathrm{s}$.	
	The train then moves at constant velocity before it moves with a constant deceleration of $0.5 \mathrm{m s^{-2}}$, coming to rest at B .	
	(a) For this model of the motion of the train between A and B,	
	(i) state the value of the constant velocity of the train,	
	(ii) state the time for which the train is decelerating,	
	(iii) sketch a velocity-time graph.	(3)
	The total distance between the two stations is 4800 m.	
	(b) Using the model, find the total time taken by the train to travel from A to B.	(3)
	(c) Suggest one improvement that could be made to the model of the motion of the train from A to B in order to make the model more realistic.

Question 7 continued

Question 7 continued				

Question 7 continued
(Total for Question 7 is 7 marks)

- **8.** A particle, *P*, moves along the *x*-axis. At time *t* seconds, $t \ge 0$, the displacement, *x* metres, of *P* from the origin *O*, is given by $x = \frac{1}{2}t^2(t^2 2t + 1)$
 - (a) Find the times when P is instantaneously at rest.

(5)

(b) Find the total distance travelled by P in the time interval $0 \leqslant t \leqslant 2$

(3)

(c) Show that P will never move along the negative x-axis.

(2)

Question 8 continued

Question 8 continued

24

Question 8 continued	
	Total for Question 8 is 10 marks)

9.

Figure 1

Two small balls, P and Q, have masses 2m and km respectively, where k < 2. The balls are attached to the ends of a string that passes over a fixed pulley. The system is held at rest with the string taut and the hanging parts of the string vertical, as shown in Figure 1.

The system is released from rest and, in the subsequent motion, P moves downwards with

an acceleration of magnitude $\frac{5g}{7}$

The balls are modelled as particles moving freely.

The string is modelled as being light and inextensible.

The pulley is modelled as being small and smooth.

Using the model,

(a) find, in terms of m and g, the tension in the string,

(3)

(b) explain why the acceleration of Q also has magnitude $\frac{5g}{7}$

(1)

(c) find the value of *k*.

(4)

(d) Identify one limitation of the model that will affect the accuracy of your answer to part (c).
